C J SAKSHI

ENGINEERING INTERN | BENGALURU, INDIA | 8971321029

DETAILS

#20/12 Ambhavillas Residency
,Ground floor,flat no 004. Opposite
To Sports Villa, Pattanagere, Raja
Rajeshwari Nagar 560098
Bengaluru
India
8971321029
cjsakshi29@gmail.com

SKILLS

SQL

Python, C/C++, Java, Modern C++

Machine Learning

Data Science

HTML, CSS, JavaScript, Streamlit

Docker, Kubernetes, AWS, Jira, Git/GitHub,

Cisco Packet Tracer, Linux CLI

HOBBIES

Dance
Reading
Event Organizing

PROFILE

I'm a passionate B.Tech student in my 4th semester with a strong passion for technology and innovation. I've built and contributed to projects in **Machine Learning**, **Python (flask, tkinter)**, **web development**, and **computer network simulations** using tools like Cisco Packet Tracer. These experiences have strengthened my skills in problem-solving, coding, and working with real-world tech stacks. I'm always eager to learn new concepts and apply them creatively to build impactful solutions.

EDUCATION

BTech (H), RV University, Bengaluru
August 2023 — May 2027

I am currently pursuing my B.Tech in the 2nd year (4th semester) of engineering, and I have a strong passion for learning new things and expanding my knowledge.

INTERNSHIPS

Machine Learning (Cybersecurity) at Dhee Centre for AI and Data Science, RV University, Bengaluru
June 2025 — July 2025

Developed a cybersecurity project focused on **network anomaly detection**, leveraging the **Random Forest algorithm** to accurately identify unusual traffic patterns and potential security threats, thereby enhancing network intrusion detection and response capabilities.

PROJECTS

MailOrg is an email classification system developed using **machine learning** techniques, specifically **clustering algorithms**. The system uses **text vectorization** to process email content and groups similar emails into categories, helping users organize their inbox more effectively.

ClubsRVU is a **student club management system** developed using **Flask** for backend development and a **SQL database** for storing and managing data. It helps streamline the management of club memberships, events, and activities, allowing students and administrators to easily track and coordinate club-related tasks.

A **Deep Reinforcement Learning** system was created utilising **A2C** to optimise emergency vehicle routing in a 6x6 metropolitan grid. It was implemented in Python with PyTorch and NetworkX, reducing trip steps from 14 to 2 for an example route while reacting to traffic and obstacles using action masking and personalised incentives.

Developed **FetchAF**, a web application that allows non-technical users to query PostgreSQL databases in plain English. It is built with Streamlit, SQLAlchemy, and Cohere's NLP API to produce correct SQL queries and provide an intuitive user interface. Agile methodologies and Docker were used for deployment, which improved data accessibility and security significantly.

ACHIEVEMENTS

2nd round qualifier in **Ideathon** (RV University)

Completed **Programming in Modern C++ (NPTEL).**
